Instruction of loading the applications to the regulator Climatix POL63x using SD memory cards

Step 1: Insert SD card to the regulator

- Insert SD card with recorded files to the slot on the back side of the controller
- Push the SD card to the end position

- Reject the SD card by pressing it again (after uploading)

Step 2: Loading the operating system and application files from SD card to the controller

Press the service button

- Turn off the controller from the power supply
- Using a suitable tool, press the service button !! WARNING: Too strong pressure on the button may damage the control board.
- Turn on the controller to the power supply of the controller with the inserted SD card
- Keep the service button for red BSP LED (5 sec)
- When recording BSP, the LED will change colour
- End of recording is indicated by orange LED BSP. After the end of the recording, wait for about 2 min.

- Restart the controller (turn off/on)
- After the restart, the green BSP LED will light
- When having troubles, then repeat the procedure once more

Step 3: Loading of parameters and configuration file from SD card to the controller

Using of SD card on controller´s display or with web browser

- On the controller display select **Login → PIN** in the menu and enter **"2222"**
- In the menu select **SystemObjects → Save/Load → SettingsSave◄◄SD** and select **Execute**
- Confirmation of uploading the file to the controller is signalled by the text **"Done"**
- In the **RequiredReset!** select **Execute**, the controller will restart automatically
- **Repeat the whole process of uploading parameters twice!**
- Finally, remove the SD card and in **SaveApplication** select **Execute** item, the controller will restart and is ready for further use
